BRAC University
MAT-215
Exercise Sheet # 2

1. Evaluate the following Limits:

(i) $\lim_{z\to 1+i} \dfrac{z^2 - z + 1 - i}{z^2 - 2z + 2}$ (ii) $\lim_{z\to 1+i} \left\{\dfrac{z-1-i}{z^2-2z+2}\right\}^2$ (iii) $\lim_{z\to i} \dfrac{z^2+1}{z^6+1}$.

2. Use the definition of neighborhood, solve the following problems:

(i) Show that $\lim_{z\to i} 2z = 2i$

(ii) Show that if $f(z) = \frac{i\bar{z}}{2}$ then $\lim_{z\to 1} f(z) = \frac{i}{2}$.

3. If $f(z) = \dfrac{2z-1}{3z+2}$, prove that $\lim_{h\to 0} \dfrac{f(z_0+h) - f(z_0)}{h} = \dfrac{7}{(3z_0+2)^2}$ provided $z_0 \neq -\dfrac{2}{3}$.

4. Let $f(z) = \dfrac{z^2+4}{z-2i}$ if $z \neq 2i$, while $f(2i) = 3+4i$, is $f(z)$ *continuous at* $z = 2i$.

5. Find all points of discontinuity for the function $f(z) = \dfrac{2z-3}{z^2+2z+2}$.

6. Using the definitions, find the derivative of each function at the indicated points

(i) $f(z) = \dfrac{2z-i}{z+2i}$ at $z = -i$

(ii) $f(z) = 3z^{-2}$ at $z = 1+i$.

7. Evaluate the following Limits using L' Hospital's rule

(i) $\lim_{z\to 2i} \dfrac{z^2+4}{2z^2+(3-4i)z-6i}$ (ii) $\lim_{z\to 0} \dfrac{z-\sin z}{z^3}$ (iii) $\lim_{z\to 0} \left(\dfrac{\sin z}{z}\right)^{\frac{1}{z^2}}$

8. Determine which of the following functions u are harmonic. For each harmonic function find the conjugate harmonic function v and express $u+iv$ as an analytic function of z

(i) $u = 3x^2y + 2x^2 - y^3 - 2y^2$

(ii) $u = xe^x \cos y - ye^x \sin y$

(iii) $u = e^{-x}(x\sin y - y\cos y)$.
